

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

The following table gives the results of the treatment on the 20 battalions referred to. The average duration of the treatment was 10 weeks.

Battalions numbered serially.	Strength.	Number of cases diagnosed as malaria.				Number of days under treatment.
		During week commencing first stage of treatment.	During week ending first stage of treatment.	During a week in second stage of treatment.	During week completing treatment.

To quote further:

"It should, of course, be understood that the battalions were not subject to infection or reinfection in France, and that the cases among them were therefore relapses. Few of the men were invalided out of the battalions after arrival in France."

The table shows that during the week of commencement of the first stage of treatment, in the first 10 battalions, there were 1,342 cases of malaria among 7,490 men and that there were three relapses during the last week. In the 20 battalions there were 2,320 cases during the week of commencement of the treatment and 32 relapses during the last week.

DIVISION OF VENEREAL DISEASES, OCTOBER, 1919.

The accompanying table covers the activities of 217 of the clinics operating under the joint control of the United States Public Health Service and State boards of health during the month of October, 1919. There were 9,686 new admissions and 27,334 remaining from last month, making a total of 37,020 under treatment.

There were 97,693 treatments administered to the patients under the care of these clinics. Of these treatments 18,072 were the administration of arsphenamine.

Census of patients under care of 217 of the clinics operated by the United States Public Health Service and State boards of health, for the month of October, 1919.

State and city.	Total patients.	Re-main-ing on Oct. 1.	New admis-sions.	Discharged.			Discontinued treatment.		Re-main-ing under treat-ment.
				As cured.	Prob-ably cured.	Non in-fectious but not cured.	With permis-sion.	With-out permis-sion.
